SOLUTIONS FOR ENERGY FROM WASTE

With an extensive product portfolio built up over the past 120 years and a nationwide network of 54 branches, you can be assured that we are well-equipped to deliver the impeccable service and product excellence vital in the Energy from Waste industry. Each of our branches is well stocked with a breadth and depth of relevant products, supported by dedicated internal and external sales teams, and fully merchandised trade counters.

Supporting our branch network are two national distribution centers: the 105,000 sq ft National Distribution Centre in Leicestershire, and the 47,500 sq ft National Tube Distribution Centre in Coventry. Our commitment to product availability remains pivotal to our success, ensuring seamless access for our valued customers. Customer orders received up to 4pm in branch can be collected first thing the following morning - a supply chain service unrivalled in our market.

In our ongoing pursuit of service excellence, we take pride in showcasing a broad range of Brands and Services, affirming not only our expansive product range but also our specialisation in the ranges that matter to you. At every step, we are dedicated to enhancing your experience and reinforcing our position as a trusted partner in the industry.

We appreciate the Energy from Waste industry is reliant on high quality products for scores of different applications.

- + Steam generation
- + Plant optimisation
- + Control of high temperature gases
- + District heating systems

In many cases we can offer not only one solution but a choice, depending on your specific requirements.

For example on AD Plant, where chemical resistance is of utmost importance, we can offer a metal or plastic valve or piping solution appropriate to the temperatures, pressures and media involved.

Another key issue for the Energy from waste industry is the measurement and control of steam and water and this is where our vast range of pumping solutions, valves and controls comes into play.

We constantly work with our customers to reduce their overall maintenance, repair and operation costs, reduce their wastage and increase productivity by reducing their unplanned downtime.

In summary, our success comes from the ability to recognise the increasingly stringent requirements demanded by our customers and the end-user demand for cost-effective durable solutions.

We provide not only quality products at competitive prices but reliability and the highest service levels in our sector.

BRANDS AND SERVICES

**+ Pegler
Louden**
INDUSTRIAL VALVES SPECIALISTS

Pegler & Louden are the specialist valve and valve automation support team of BSS.

Pegler & Louden operates in partnership with the BSS branch network providing major customers and industries with product solutions that control the flow of substances in some of the most demanding operational environments.

The specialist team are based in Nottingham and have over 180 years experience between them.

amspumps@bssgroup.com

A large industrial facility, possibly a refinery or chemical plant, is shown at sunset. The sky is a mix of orange, yellow, and blue. The facility features numerous tall distillation columns, storage tanks, and a complex network of pipes and walkways. The scene is illuminated by the warm light of the setting sun, with some artificial lights visible within the plant.

OUR APPLICATIONS

We understand just how broad and potentially complex requirements in industries such as Energy From Waste can be, and we offer solutions across a wide range of processes including...

- + Plant optimisation
- + Waste water treatment
- + Compressed air & gases
- + Cooling processes
- + High temperature gases
- + Hot & cold water supply
- + Measurement & Control
- + Steam generation
- + Pressure boosting
